

public/ Directory Guide

Web Root & Static Server Entry Points

1. Folder Purpose & Architectural Role

The **public/** directory contains top-level static HTML entry points served directly at the root domain or used for static web server hostings like GitHub Pages.

2. File Breakdown & Dependency Matrix

File / Subdirectory	Detailed Description & Architectural Role
<code>index.html</code>	Top-level landing homepage served at root URL (/), displaying portal overview cards and mode-switched login/register forms.
<code>404.html</code>	Custom CivicPulse-branded 404 error page displayed when users navigate to invalid routes.

3. Operational Notes & Usage Instructions

Used by GitHub Pages static hostings and Render fallback routing.
